The object of camouflage...

... is to break up the outline of an object in order to make it harder to see. It is not hard to arrive at a pattern that will accomplish this. All one needs is several sheets of thin cardboard and a razor knife.

Random patterns are drawn on the cardboard (see the samples in this brochure) and then cut out with the razor knife. Each piece of cardboard will have holes cut for the different colors of paint used to get the correct number of irregular patterns.

A base color may be applied on the object to be camouflaged. The cardboard pattern can then be set on the object and the different colors brushed or sprayed. Work in stages, depending on how many colors are being used.

Another method is to use low-tack sticky-backed paper. The base coat color is put on first. The adhesive paper is then applied over this coat after having random shapes cut into it. The next color of paint is brushed or sprayed on the item and after it dries, the paper is carefully peeled off, leaving some of the base color showing. Again, work in stages, depending on the number of colors used. Use your imagination, but strive for variety.
Nelson Paint Co. is able to supply the outdoorsman and hunter with flat woodland-related colors to effectively camouflage anything used in the outdoors. Choose from a wide array of non-reflective colors to allow structures, vehicles, and other equipment to blend in with the natural colors of the surrounding terrain.

Samples of camo patterns possible with our paint

All colors are available in qts. or gals. for:
- Vehicles
- Outdoor structures
- Equipment
- Anything metal
- Works on properly primed wood too

The colors in this brochure are *samples only*. For an actual chip of a color presented here, feel free to request one and we will send it.

We can also match a custom camo color if you provide us with a sample, minimum 2” square. Expect a longer delivery time for this service.

All colors are approximate.
